FYP Report Structure Guidelines

Chapter 1: Introduction

1.1 Background and Context

- Overview of the field of the project
- Brief history leading to the current state of the topic
- Explanation of why the topic is important and relevant

1.2 Problem Statement

- Identification of the specific problem the project aims to address
- Explanation of why this problem/question is significant

1.3 Objectives of the Project

- Clear and specific objectives outlining what the project aims to achieve. (3 objectives. Eg, to develop……, to implement xxxxx in the development of……., to deploy…..)
- Explanation of how achieving these objectives will contribute to the field

1.4 Scope and Limitations

- Definition of the boundaries and scope of the project
- Discussion of any limitations or constraints that may affect the project's execution or findings

1.5 Significance of Project

- Explanation of the importance and relevance of the project
- Discussion of potential benefits or implications of the project's outcomes

1.6 Organisation of Report / Report Structure

- Brief summary of the chapters and sections included in the report
- Explanation of how the report is organized to address the project objectives

1.7 Summary/Conclusion

- Brief summary of the chapter

Chapter 2: Literature Review

Introduction to Literature Review

- Explanation of the purpose and importance of the literature review (general)
- Overview of the structure and organization of the literature review section

2.1 Review of Relevant Theories and Concepts (or Relevant Features and Functions))

- Discussion of key theories and concepts relevant to the project
- Explanation of how these theories and concepts inform the research approach

2.2 Study of Similar Existing Systems

- Review of existing systems, products, or solutions that are similar to the one proposed in the project. (at least 3 similar existing systems)
- Comparison of features, functionalities, strengths, and weaknesses of these systems
- Analysis of user feedback, adoption rates, and success stories of similar systems

2.3 Identification of Gaps in the Literature

- Analysis of the existing literature to identify gaps, contradictions, or areas needing further exploration
- Explanation of how the project aims to address these gaps

2.4 Summary of Key Findings

- Synthesis of the main findings from the literature review
- Discussion of how these findings inform the project's research objectives and approach

2.5 Summary/Conclusion

- Brief summary of the chapter 2

Chapter 3: Methodology and Requirements Analysis

3.1 Project Methodology

- Explanation of the methodology used for the development process (e.g., Agile, Waterfall, Iterative, etc.)
- Justification for selecting the chosen methodology based on project requirements and constraints

3.2 Requirements Gathering

- Techniques used to elicit and document system requirements (e.g., interviews, surveys, brainstorming sessions, etc.)
- Documentation of functional and non-functional requirements

3.3 Requirements Analysis

- Analysis and prioritization of requirements
- Identification of dependencies and conflicts among requirements

Chapter 4: System Design

4.1 Architecture Design

- High-level overview of the system architecture, including components and their interactions
- Description of architectural patterns or styles used in the design

4.2 Database Design

- Design of the database schema, including tables, relationships, and constraints
- Discussion of database management system (DBMS) selection and justification

4.3 User Interface Design (Prototype Design for FYP1, Real design for FYP2)

- Design of the user interface (UI) elements, including wireframes, mockups, and prototypes
- Consideration of user experience (UX) principles and accessibility requirements

4.4 Detailed Design

- Detailed description of system components, modules, and APIs
- Design rationale explaining design decisions and trade-offs

FOR FYP 2 Later

Chapter 5: Implementation and Testing

5.1 Development Environment Setup

- Description of the development tools, technologies, and frameworks used
- Configuration management practices and version control systems employed

5.2 Coding and Implementation

- Details of the coding process, coding standards, and best practices followed
- Overview of coding conventions and guidelines adhered to

5.3 Testing Strategy

- Overview of the testing approach (e.g., unit testing, integration testing, system testing, etc.)
- Description of test cases, test scenarios, and testing methodologies

5.4 System Testing and Validation

- Execution of test cases and validation against requirements
- Discussion of testing outcomes, issues encountered, and resolutions

Chapter 6: System Deployment

6.1 Deployment Plan

- Explanation of the deployment strategy, including deployment environment and considerations
- Description of deployment tools and techniques used

6.2 User Training and Support

- Plans for training end-users and providing ongoing support after system deployment
- Considerations for user documentation and help resources

6.3 Rollout Strategy

- Discussion of the rollout plan, including phased deployment or full deployment strategies
- Risk mitigation strategies for deployment issues

Chapter 7: Discussions and Conclusion

7.1 Discussion of Results

- Interpretation and analysis of the project outcomes
- Comparison of actual results with initial objectives and requirements

7.2 Lessons Learned

- Reflection on the challenges, successes, and lessons learned during the development process
- Recommendations for future projects or improvements

7.3 Conclusion

- Summary of key findings and contributions of the project
- Final thoughts on the project's significance and impact
